Section 1 : Coding

1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

Input Format

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

Output Format

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5
10 20 30 40 50
Output: 10 20 30 40 50

Answer

```
// You are using GCC
#include<stdio.h>
#include<stdlib.h>

struct node{
    int id;
    struct node *prev;
    struct node *next;
};
struct node *head=NULL;
struct node *tail=NULL;

void insert(int id){
    struct node *newnode=(struct node*)malloc(sizeof(node));
    newnode->id=id;
    newnode->next=NULL;
    if(head==NULL){
        newnode->prev=NULL;
        head=newnode;
        tail=newnode;
    }
    else{
        tail->next=newnode;
        newnode->prev=tail;
```

```
        tail=newnode;
    }
}

void display(){
    struct node *temp=head;
    while(temp!=NULL){
        printf("%d ",temp->id);
        temp=temp->next;
    }
    printf("\n");
}

int main()
{
    int n,id;
    scanf("%d",&n);
    for(int i=0;i<n;i++){
        scanf("%d",&id);
        insert(id);
    }
    display();
    return 0;

}
```

Status : Correct
